
QUESTIONNAIRE ON THE USE OF IT IN THE OPERATION OF THE SERVICE CONVENTION

[NAME of STATE or territorial unit:]

Portugal

1.1 To what extent is Your State in favour of the use of information technology to facilitate the operation of the Service Convention?

Strongly in favour

1.1 To what extent is Your State in favour of the use of information technology to facilitate the operation of the Service Convention?

- comment

During the last years, the policy of the Portuguese Government is the efficiency, proximity and innovation of the Justice system.

Improvement of the management of the judicial system — Simplifying procedures in courts, internal and external communication with citizens, organisation and support functions for judicial activity

1.2 Is the transmission by electronic means of requests for service possible under the internal law of Your State?

Yes

1.2 Is the transmission by electronic means of requests for service possible under the internal law of Your State? - comment

In internal cases, the Portuguese courts could transmit requests for service to solicitors through CITIUS (electronic case management platform used by Portuguese courts).

Please provide the specific provision/s:

1.3 Is the execution by electronic means of requests for service possible under the internal law of Your State?

Yes

1.3 Is the execution by electronic means of requests for service possible under the internal law of Your State? - comment

Only if the party is represented by a lawyer. The notification is made via CITIUS to the lawyer.

Under the internal law it's possible provide notifications electronically via CITIUS to the Public Prosecutor (Ministério Público), insolvency practitioners and other public entities.

Please provide the specific provision/s:

1.4 Is Your State party to any bilateral or multilateral agreements, other than the Service Convention, which provide for the use electronic means in the transmission or execution of requests for service?

Non

1.4 Is Your State party to any bilateral or multilateral agreements, other than the Service Convention, which provide for the use electronic means in the transmission or execution of requests for service? - comment

Please provide the specific provision/s:

1.5 Has Your State encountered any challenges regarding the use of information technology to facilitate the operation of the Service Convention?

Yes

[Internal law limitations]

Yes

[Judicial or administrative structures]

No

[Implementation challenges (e.g. lack of resources)]

No

[Costs]

No

[Selection of the appropriate technology]

No

[System interoperability / compatibility]

No

[Security concerns]

No

[Cooperation with other Contracting Parties]

No

[Other Challenges]

No

Please specify:

1.6 To what extent would Your State be in favour of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention?

Strongly in favour

Please explain your reasoning, if possible:

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Internal law limitations]

Yes

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Judicial or administrative structures]

Yes

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Implementation challenges (e.g. lack of resources)]

Yes

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Costs]

No

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Selection of the appropriate technology]

Yes

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [System interoperability / compatibility]

Yes

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Security concerns]

Yes

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Cooperation with other Contracting Parties]

No

1.7 What, if any, particular challenges does Your State envisage in relation to the possible use of a common electronic platform to be used by all Contracting Parties in the operation of the Service Convention? [Other challenges]

No

Please specify:

1.8 What is the status of the use of information technology in Your State for the transmission of requests for service under the main channel (i.e. to the Central Authority, Art. 5(1)(a))?

Under consideration

1.9 What is the status of the use of information technology in Your State for the transmission of requests for service under the alternative channels (Art. 10)? [Art. 10(a)]

Fully implemented and operational

1.9 What is the status of the use of information technology in Your State for the transmission of requests for service under the alternative channels (Art. 10)? [Art. 10(b)]

Fully implemented and operational

1.9 What is the status of the use of information technology in Your State for the transmission of requests for service under the alternative channels (Art. 10)? [Art. 10(c)]

Unknown

1.10 What type of electronic transmission does Your State use, or would consider using for requests for service under the main channel?

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT. [E-mail (regular)]

Yes

1.10 What type of electronic transmission does Your State use, or would consider using for requests for service under the main channel?

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT. [E-mail (secured/encrypted)]

Yes

1.10 What type of electronic transmission does Your State use, or would consider using for requests for service under the main channel?

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT. [Electronic transmission platform administered by a public/State authority]

Yes

1.10 What type of electronic transmission does Your State use, or would consider using for requests for service under the main channel?

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT. [Electronic transmission platform administered by a private service provider]

No

1.10 What type of electronic transmission does Your State use, or would consider using for requests for service under the main channel?

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT. [Electronic transmission using digital ledger technology]

No

1.10 What type of electronic transmission does Your State use, or would consider using for requests for service under the main channel?

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT. [Other]

No

Please provide details:

The transmission of requests from Portuguese Courts to the Central Authority of Portugal are made through CITIUS (electronic case management platform used by Portuguese courts).

All requests from Portugal to Brazil, and from Brazil to Portugal, are made by email with documents electronically signed.

1.11 On average, approximately what percentage of requests for service transmitted electronically by other Contracting Parties does Your State accept?

(Please round the estimated percentage down, if applicable)

Unknown

1.12 Since 2014, on average, approximately what percentage of requests for service received by Your State were transmitted electronically by forwarding authorities of other Contracting Parties?

(Please round the estimated percentage down, if applicable)

Unknown

If possible, please provide the number of requests for service that were received per year, and the name(s) of the main Contracting Parties from which these were received: [2014:]

If possible, please provide the number of requests for service that were received per year, and the name(s) of the main Contracting Parties from which these were received: [most received from:]

If possible, please provide the number of requests for service that were received per year, and the name(s) of the main Contracting Parties from which these were received: [2015:]

If possible, please provide the number of requests for service that were received per year, and the name(s) of the main Contracting Parties from which these were received: [most received from:]

If possible, please provide the number of requests for service that were received per year, and the name(s) of the main Contracting Parties from which these were received: [2018:]

If possible, please provide the number of requests for service that were received per year, and the name(s) of the main Contracting Parties from which these were received: [most received from:]

1.13 If the Central Authority of Your State has received requests for service transmitted electronically under the Service Convention, on average, what percentage of the documents received are subsequently served electronically?

(Please round the estimated percentage down, if applicable)

Unknown

If possible, please provide details as to how the documents are subsequently served:

1.14 What is the status of the implementation of an electronic case management system in Your State for incoming and outgoing requests for service issued pursuant to the Service Convention?

Electronic case management system: A system that enables casework and related workflows to be followed and managed through electronic communication of information between the individuals concerned (incl. staff, as well as parties and their representatives in some cases).

Under consideration

1.15 What type of electronic case management system does Your State use, or would consider using for incoming and outgoing requests for service issued pursuant to the Service Convention?

Electronic case management system: A system that enables casework and related workflows to be followed and managed through electronic communication of information between the individuals concerned (incl. staff, as well as parties and their representatives in some cases).

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT.

Case management system administered by a public/State authority

Please provide details:

Portugal doesn't have a case management system exclusively for requests for service.

The case management system to be implemented should be compatible and/or interoperable with CITIUS (electronic case management platform used by Portuguese courts). Representatives have access to CITIUS and could follow all steps. In some cases parties are allowed to follow their own pending cases.

1.16 If Your State uses an electronic case management system for incoming and outgoing requests for service issued pursuant to the Service Convention, which of the following best describes the system?

Electronic case management system: A system that enables casework and related workflows to be followed and managed

through electronic communication of information between the individuals concerned (incl. staff, as well as parties and their representatives in some cases).

Part of the procedure for issuance or execution of requests for service is done

1.16 If Your State uses an electronic case management system for incoming and outgoing requests for service issued pursuant to the Service Convention, which of the following best describes the system?

Electronic case management system: A system that enables casework and related workflows to be followed and managed through electronic communication of information between the individuals concerned (incl. staff, as well as parties and their representatives in some cases). - comment

All Requests received through the Central Authority

are sent to the Portuguese competent court via CITIUS (electronic case management platform used by Portuguese courts). Most of the steps for the execution of the request are made electronically . The outgoing cases are issued at CITIUS, however they are sent via postal services.

1.17 In 2018, on average, approximately what percentage of requests for service received by Your State under the Service Convention led to service being performed/effected using information technology?

(Please round the estimated percentage down, if applicable)

Unknown

1.18 When competent authorities of Your State execute requests for service transmitted electronically by another Contracting Party under the Service Convention, in approximately what percentage of instances is the certificate of service then returned electronically to the applicant (Art. 6)?

(Please round the estimated percentage down, if applicable)

Unknown

If possible, please provide details as to how the certificate of service establishing execution is returned:

1.19 In 2018, what was the approximate percentage (on average) of requests received by Your State in which the foreign forwarding authority requested service be performed electronically under the Service Convention (Art. 5 (1) b))?

(Please round the estimated percentage down, if applicable)

Unknown

If possible, please provide the following details: [Number of such requests:]

If possible, please provide the following details: [Main Contracting Parties from which such requests were received:]

Technology(ies) requested:

Distributed ledger technology (DLT): A database held by participants (or nodes) in a decentralised network, where transactions and records are processed, saved and replicated by each node independently and shared with the other nodes, seeking to validate the transaction by achieving consensus on its authenticity. Blockchain is perhaps one of the most well-known of the various forms of DLT. [Electronic service by private e-mail]

No
